

## RainCatcher RC For garden irrigation

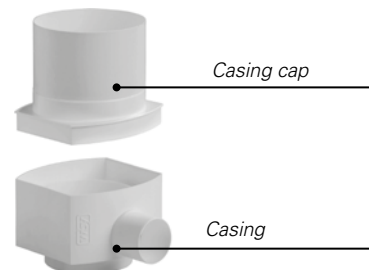

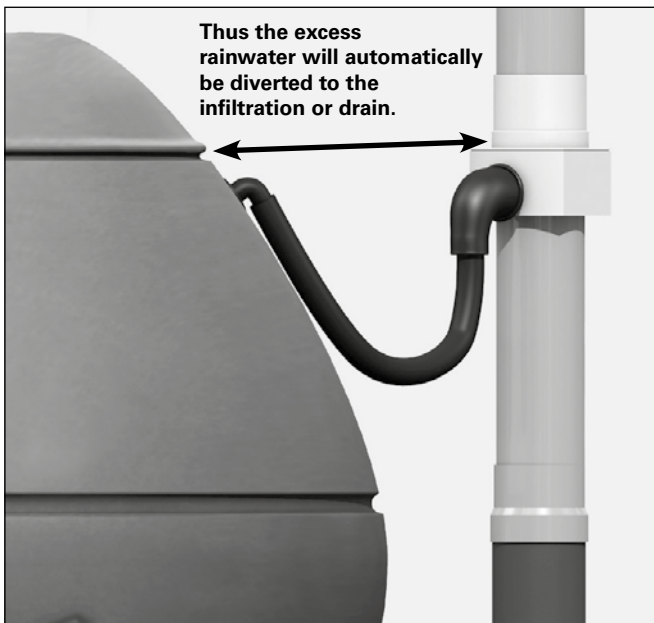

### Description

The RainCatcher RC is made of PP Plastic, with a UV stabilisation. The RainCatcher RC diverts the Rainwater from the downpipe through the outlet connection to a garden barrel or storage tank. The special construction of the RainCatcher RC is designed to separate coarse materials like leavers, moss, insects, etc. directly through the downpipe to the soakaway or drain. The construction of the RainCatcher RC creates no obstruction or narrowing of the downpipe. It is ensured that the full flow of Rainwater in the downpipe is rainfall, over 90% of the run-off rainwater will be collected. The RainCatcher RC has an inlet diameter directly fitting for 110 mm round pipes. RainCatcher RC is designed to be inserted directly into the vertical section of a rainwater pipe. This product is built according to DIN and EN standards.

### Features

- Automatic separation of rainwater out of downpipe to rainwater barrel
- For installation in a downpipe
- 10-year guarantee
- Simple device for collecting rainwater
- Minimum maintenance required
- Automatic overflow protection for rainwater barrel
- For plastic downpipes DN 100 (outside Ø110 mm)
